Spring Semester

Week 3

- Meeting booked for Wednesday to discuss Interim Report and progress for this term
- Started to analyse the learning outcome data in the database - using **simply querying** atm to find links etc
 - Also downloaded the data mining **WEKA** you linked on fb will have a look at that to see if can be of any use
 - Want to discuss with you the possible different querying tools etc I could use**
- Transcripts have been created for the focus groups conducted last semester - not sure **how I am going to analyse** these or if I will upload them into a database or not
 - Want to discuss options with you regarding how to go about this**
 - Main point of these is to use both the **focus group** data plus the data that will be collected from the questionnaires and compare this against the taxonomy that will be created from the "module learning outcomes data" and then change this based on "student data"
- Questionnaire has been designed - just needs to proofread it and then I can send it out to the students
 - My plan is to send this out over the next 3-5 weeks and then upload the collected data from the spreadsheet to a new database. I can then query this and find patterns
 - This alongside the focus group data can then be used to change and inform the taxonomy that will be built from the "module learning outcomes data"
 - Again want to discuss the best way of using this data with you in the meeting**
- I have seen Helen Phillips to discuss **her feedback** for the interim report and all seems well there - she has provided me with some additional documents that I can look at when developing my taxonomy
- She also mentioned looking at (even if I decide it isn't relevant to my project) the way in which students learn (i.e. Visual, Kinetic, Aural etc.) - will have a **brief** look into this and see if there are any links to my project

Star with terminological processing to see if there are any important themes. Use this link: <http://www.nactem.ac.uk/batch.php> We'll discuss details tomorrow.

Google "content analysis" and see if that can help you make sense of the data.
