Subject: Final Year Project: Learning Outcomes Focus Group Email

Dear Tracey,

Could you please forward the email below onto Computer Science students for all three years please

Thank you

Charlotte Doherty

Dear CS Students,

I'm currently a third year student and for my final year project I am looking at the expected learning outcomes associated with each module on the computer science degree program. As part of this I am also interested in getting your feedback on what you feel you are learning from these modules.

I am looking at holding some focus groups for each year group around week 8 and 9 to get this feedback and allow you to raise any points you think are important/relevant.

For 1st and 2nd years I will be looking at 2 specific modules - listed below:

1st Years: Web Applications & Problem Solving with Python
2nd Years: Algorithms and Data Structures & Database Systems

For 3rd years, as most modules undertaken are optional could you email me with which modules you are taking/interested in providing feedback on and I will arrange focus groups around this.

I will be putting on refreshments for this and the session should last no longer than 45 - 60 minutes.

If you are at all interested in participating in this or want to find out more you can contact me via email: dohertycc@cardiff.ac.uk

Could you also let me know when you are free round weeks 8/9 so I can organise the best time for these focus groups.

It would be really great to get as many of your comments and opinions as possible so please consider doing this,

Thanks

Charlotte Doherty
