Use pre-configured mobile screen guides for iPhone, iPad and Android devices (both portrait & landscape)

### Create Powerful Mobile Prototypes

Building mobile applications requires different design decisions than traditional websites and web applications. Quickly create interactive mobile prototypes to work through the challenges that come with creating a mobile experience, before time and money are lost in development rework.

- Use pre-configured mobile screen guides for iPhone, iPad and Android devices (both portrait & landscape)
- Link your browser to your device to test a prototype directly on the device, then provide feedback in your desktop browser with the View-on-Device feature
- Simulate applications with greater fidelity with 2D and 3D animated transitions
- Access mobile stencils from a central resource library
