

The information within this document is to explain how to play the game in case there are issues.

1. The best way is to use the link below that will take you to the game page hosted on the Scratch website. The game does not require anything else, all you have to do open the game in full screen and click the green flag to start the code.

Link:

<https://scratch.mit.edu/projects/535974574/>

2. I have submitted a file of the game that was downloaded from Scratch. To use this file you will have to use one of two ways:
 1. Upload the file into a new project on the Scratch website. You will need to use the animation screen in the top right where there is a maximize screen button. Once the screen is maximized, you should click the green flag in the top left to start the code and the game.
 2. Similar as above but you can download the Scratch desktop program and use that to run the code. It should be the same instructions to import the file and play as above
